

Stay cool – 365 days a year The new split air conditioning units from Bosch

March 2020

Page 1 of 5

- ▶ Cooling and heating function for year-round temperature comfort
- ▶ More efficient thanks to innovative inverter technology
- ▶ Simple operation, compact design, first-class Bosch service
- ▶ Fascinating design variants for every interior situation
- ▶ Many comfort functions for individual feel-good climate

At an ambient temperature of about 20 to 25 °C, our body needs the least amount of energy to maintain a normal and healthy body temperature of about 37 °C. In the hot summer and in between seasons, we are unfortunately very far from this “feel-good temperature”. We sweat or freeze. The new split air conditioning units from Bosch can change this. They ensure a pleasant and healthy room climate 365 days a year – at the touch of a button.

The split air conditioning units from Bosch for even more efficient creation of a feel-good atmosphere

Innovative inverter technology ensures that the output of all devices of the Bosch Climate series is always adapted to the current need. As a result, the energy consumption of all split air conditioning units from Bosch is kept at a minimum at all times. All devices have an A++ or A+++ ErP energy efficiency class rating in the cooling mode and are operated with the environmentally friendly R32 refrigerant. Standby and energy saving functions also keep their power consumption low. Depending on the area of application, the devices are available with different output ratings.

Climate 5000 – cooling and heating made easy

The Climate 5000 is a sensible choice for anyone looking for a reliable, energy-efficient and easy-to-use air conditioning unit for cooling and heating. Its low standby consumption and the timer function save valuable energy. A biofilter and a cold catalysis filter improve the quality of the air. The **Climate 5000** cools reliably and economically down to an outside temperature of -15 °C and is

therefore perfectly suited for server rooms, etc. For the cooling or heating of several rooms, Bosch offers the **Climate 5000 MS** multi-split unit.

Climate 6000i – for a comfortable feel-good temperature

The Climate 6000i not only achieves the best energy efficiency thanks to its eco mode but also features interesting convenience functions such as a 1-2-3-5-h off timer with automatic switch-off and a drying mode to reduce humidity on sultry days. Thanks to its self-cleaning mode, mould has no chance to grow. The Climate 6000i can also be controlled via app (from Q3/2020) and offers greater comfort as well as excellent value for money.

Climate 8000i – high efficiency and best design for every room

The Climate 8000i impresses with the flat and attractive design of its indoor unit. The advantage: parts such as the air grilles can be easily removed and cleaned. The “Coanda effect” ensures a very pleasant room climate, as the cool air is guided along the ceiling and the warm air along the floor – this effectively prevents unpleasant draughts. The full-power mode steps in extra quickly – it cools or heats particularly fast at maximum output. Neighbours will appreciate the silent mode of the outdoor unit, which reduces noise emissions on the outside by up to four dB (A). And thanks to the auto start function, all settings are retained even in the event of a power failure. Control via app will also be possible from the third quarter of 2020.

Climate 9000i – elegant design and best A+++ energy efficiency

The Climate 9000i literally comes with a cool design. Inside its attractive casing, two motors direct the air flow simultaneously into two directions. This creates a pleasant climate throughout the room. In the multi-space mode, several rooms can be cooled or heated to the desired temperature. The angle of the air grilles is automatically adapted. The “Intelligent Eye” motion sensor knows exactly whether a person is in the room and ensures a more gentle air flow where required. What is more, the device has an A+++ ErP energy efficiency class rating for both cooling and heating during the off-season. As a result, the perfect feel-good temperature can be selected 365 days a year at the touch of a button. In addition, the Climate 9000i features all convenience functions of the other devices of the Bosch Climate series. All functions can also be used via app from the third quarter of 2020.

Best service – best advice – best business ideas

Heating contractors who have an appropriate certificate of competence can easily install the Bosch devices and thus tap new fields of business and win new customers. Bosch offers professionals and their customers first-class service in Bosch quality. This includes, for instance, regular cleaning of the devices and

checking of the door and window seals in order to avoid energy losses and reduce electricity consumption. The new business idea is just one click away.

Meta description

The split air conditioning units of the Bosch Climate series have a cooling function and a heating function. Therefore, they are not only a good solution for hot days with outside temperatures of up to 50 °C, but they also improve the indoor climate on cold days. All devices have an A++ or A+++ ErP energy efficiency class rating and are operated with the environmentally friendly R32 refrigerant.
